

AccessMan

Human Resources Control and Monitoring

INDUSTRY

Our Solutions

Turnstiles

Industrial and building access through high-traffic, reliable, and high-performance turnstiles using secure biometric recognition, RFID cards, QR codes, or fingerprints.

Barriers

Vehicle access with automatic activation in applications such as industrial plants, parking lots, and corporate buildings, among others. Authentication tailored to the needs and multifactorial, including biometric recognition, Long Range RFID, License Plates or QR codes.

Devices

Access control of the mobile workforce, through cell phones, data collectors, tablets, and others.

AccessMan is the ideal solution for asset and human resources management, monitoring, and tracking solution for any company or organization. Our intuitive platform allows you to track business assets through production targets, location, and status. Whether these assets are located in multiple departments, locations, or are mobile, anywhere in the world.

AccessMan allows you to achieve:

- Secure and consistent documentation for internal and external personnel.
- Control, authentication, authorization, and traceability of access.
- Reducing paperwork in documentation, workflow, production chain, etc.
- Visibility into the location, status, condition, and performance of human resources.
- Time tracking, registration, task automation, productivity, etc., as a cutting-edge tool.
- Online information, 100% web-based with high availability, from the CEO to every stakeholder in the production chain.

Our Platform

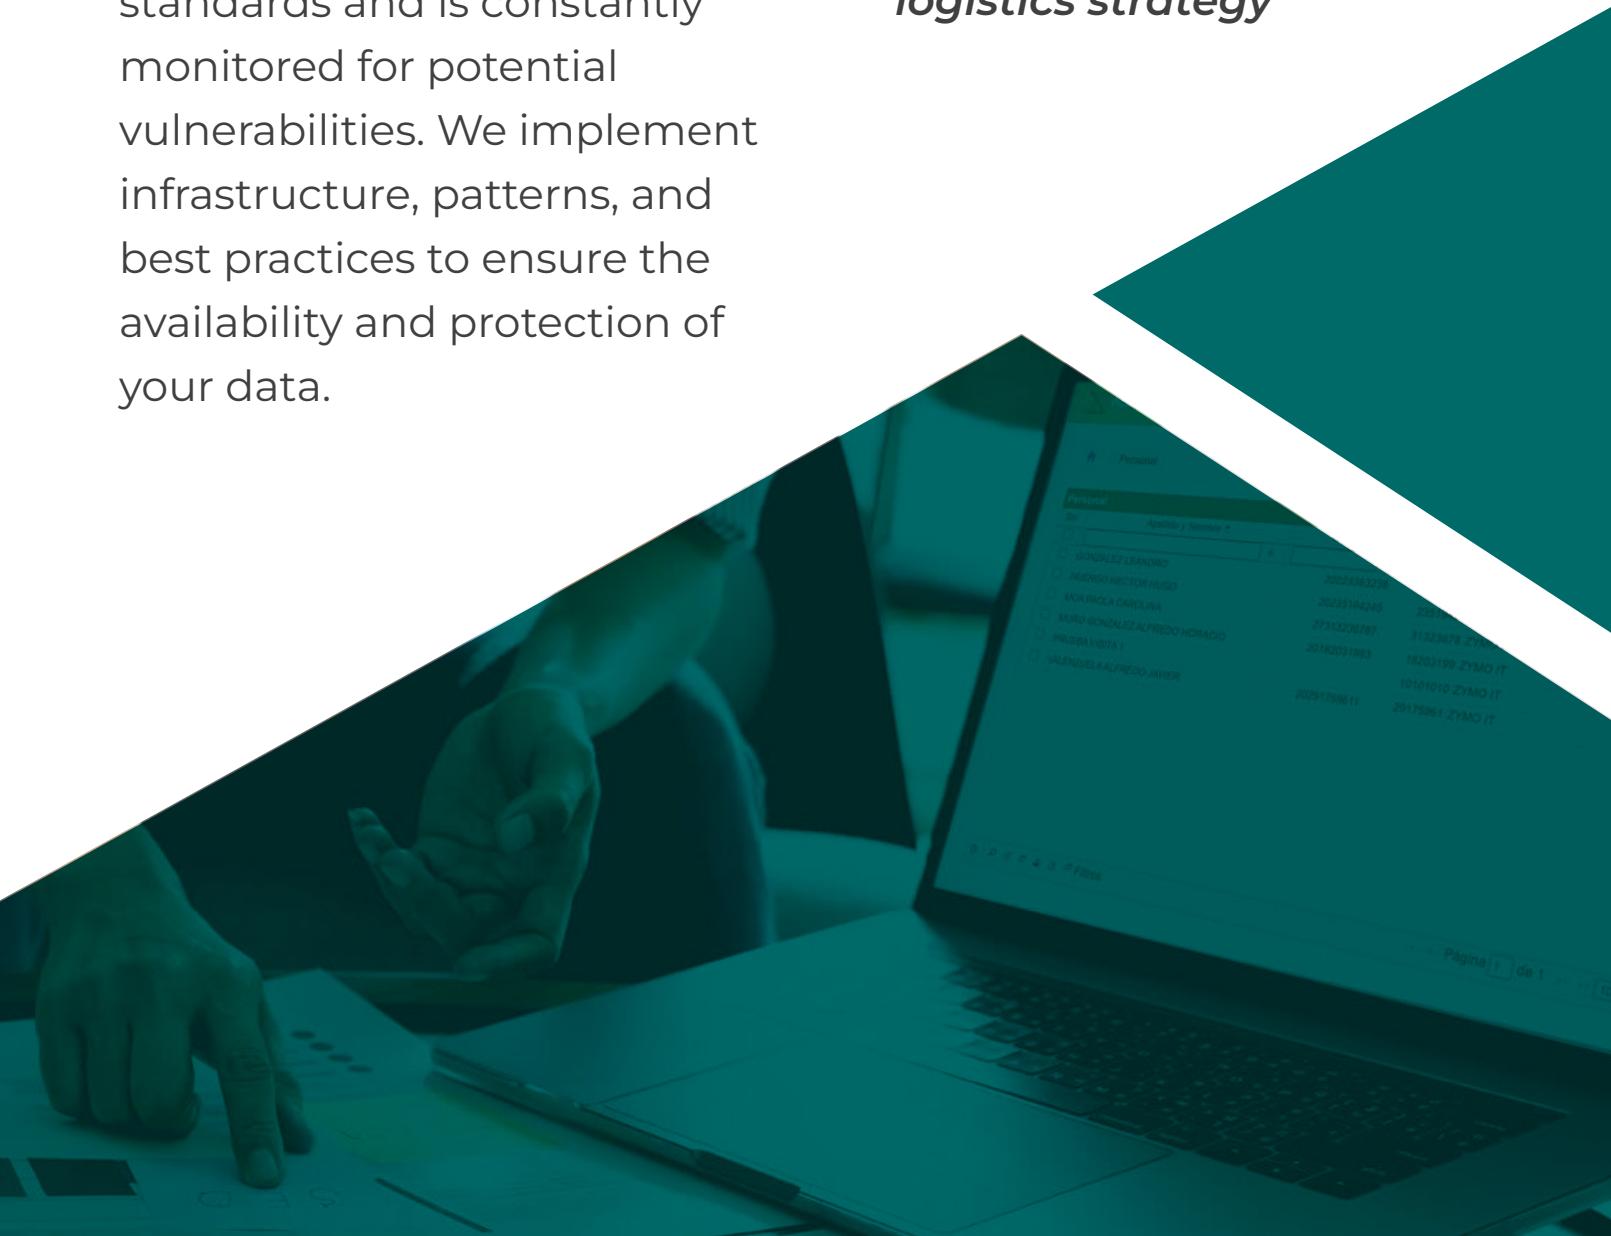

Our cloud-based platform is accessible from any location or device, with real-time information.

We offer each client customization options for AccessMan, tailored to their unique needs and business model.

AccessMan uses security standards and is constantly monitored for potential vulnerabilities. We implement infrastructure, patterns, and best practices to ensure the availability and protection of your data.

Total Integration

- ***Various HR systems (ERP, CRM, etc.)***
- ***Multiple brands of access control equipment***
- ***Native IoT & IoP platform***
- ***Mobile auditing***
- ***Time and attendance monitoring***
- ***Productivity and performance management***
- ***Location monitoring for logistics strategy***

Features

- **UNIFIED MANAGEMENT**

Digital Personnel and Contractor Files. Centrally manages documentation and updates for all employees. Distributes data acquisition and entry tasks between internal and external human resources.

- **PORTABLE AUDIT**

Complete control, capturing operational data at the point of execution. Continuous improvement with organized, online information.

- **BIOMETRIC OPERATION**

Compatible with third-party equipment and custom-built collectors, according to required security levels.

- **CONTRACTOR PAYMENTS**

Attendance and productivity settlement for internal and contractor personnel. Creation of necessary reports so that all resources can settle their tasks in a simple, transparent, and unified process.

- **SERVICE PORTAL**

A standardized online system for all stakeholders involved in asset management. Distribution of data loading and control tasks among all partners, both internal and external, assigning the correct permissions according to each profile and need to achieve 100% efficient management.

Features

- MULTIPLE COMPANIES

Control all personnel from different companies within a single system.

- OPEN SOURCE

Custom development. Training for self-development of solutions.

API for integration with existing systems.

“

We develop and integrate sustainable solutions.

We are dedicated to adding value to our customers, combining our technologies with unparalleled support.

Our Family

Supervision of Access and Field Work

- Global Workforce Control.
- Processing in less than 1 second per person.
- Field Production and Efficiency.
- Acquisition at Fixed and Mobile Points.
- Quality Control Module.
- Documentation, Workflow, and Contractor Settlement Module.

AccessMan Web App

Asset Control Multi-company and multi-location.
Online/Offline

Portable devices for access control and biometric and/or RFID authentication. With standalone or online operation.

AccessMan App

Production Log. History of records and attendance of personnel associated with the user.

Our Projects Success Stories

Lorenzati

An innovative agri-food company dedicated to reliably and sustainably producing, processing, and marketing the highest quality peanuts, grains, and oilseeds for the world.

Thanks to the solutions of our **AccessMan Industry** platform, it successfully transformed its secure access control and time and attendance processes across three industrial plants.

Citrusvil

A leading company in the global market, specializing in the production, processing, and marketing of lemons. To optimize its operations in offices and industrial plants in Argentina, **AccessMan Industry** is used to control secure access and attendance for employees, contractors, and visitors.

Ministerio Pupilar y de la Defensa

El Ministerio Pupilar y de la Defensa (MPD) of Tucumán is an organization dedicated to guaranteeing the right to defense for vulnerable adults and children. To optimize its internal management, **AccessMan Industry** was implemented, enabling more efficient administration of departments and positions, appointment scheduling, report generation, and access and attendance control for both employees and visitors.

Our Customers

Citromax Group is a global leader in the supply of essential oils, juices, lemon pulp, and natural flavors.

With **AccessMan Industry**, they were able to certify self-defense standards for the export of food products and automate time-tracking tasks for payroll calculation.

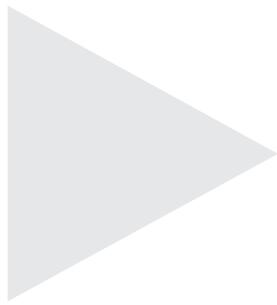

Argentilemon

Thanks to the implementation of **AccessMan Industry**, they were able to manage the attendance of more than 800 employees on rotating shifts, with access registration for contractors and visitors; using bidirectional turnstiles with facial recognition and vehicle barriers.

Gobierno de la Ciudad de Buenos Aires

AccessMan Industry supported its operational modernization process in the management and control of vehicular access through barriers equipped with high-frequency RFID tags, including vehicle license plate identification through LPR cameras.
